## **DETAILED ACTION**

### ***Allowable Subject Matter***

Claims 1-7 and 15-25 are allow.

The following is an examiner's statement of reasons for allowance:

Regarding claim 1, the prior art, Ames (US Patent 5233626), discloses the receiver includes circuitry for combining together all equalized correlated copies of the signal to provide a demodulator with a composite received signal. The combining circuitry weighs each equalized correlated copy proportional to a signal strength thereof such that those copies having a greater signal strength contribute a greater proportion to the content of the composite signal than do those copies having a lesser signal strength; however, Ames fails to teach demodulating said re-transmitted wireless signals separately within said destination receiver to produce a set of demodulated signals", as cited in the claims.

Regarding claim 15, the prior art fails to teach modulating means for modulating said wireless signals to produce a set of modulated

signals, said modulating means coupled to said receiving means; summing means for aligning in time and summing said plurality of digital signals into a single digital sum signal with a signal-to-noise ratio higher than any of said digital signals, as cited in the claim.

Regarding claim 16, the prior art fails to teach delaying each of said plurality of wireless signals by a separately predetermined delay to produce a set of delayed wireless signals; combining said delayed wireless signals into a reconstituted wireless signal; and re-transmitting said reconstituted wireless signal, as cited in the claim.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
